

# CONCLUSIONS

## I INTERNATIONAL CONFERENCE OF WOMEN IN FISHERIES

### WORKSHOP 4: WORKING CONDITIONS

The working conditions of women in fisheries are negatively affected by the lack of professional recognition of their work.

Women face job insecurity, wage gaps, the lack of certain social benefits and no recognition of the professional illnesses caused in jobs mainly undertaken by women.

Therefore, it is necessary to:

- Improve the visibility of the contribution of women in the fishing sector.
- Expand training.
- Improve partnerships and female representation in decision making processes that affect the development of their activities.
- Improve both the national and international legal framework.
