Understanding and acknowledging women’s roles in fisheries and aquaculture: Why Gender matters

Nikita Gopal
Principal Scientist
ICAR-Central Institute of Fisheries Technology
Cochin, Kerala, India
&
Vice Chair, GAF Section of the Asian Fisheries Society

Presentation at the I International Conference of Women in Fisheries, Santiago de Compostela, Spain, 5-7 November, 2018
Concepts

- **Gender** has been defined as 'a concept that refers to the social differences, as opposed to the biological ones, between women and men that have been learned, are changeable over time and have wide variations both within and between cultures.
- Gender **equity** refers to the process of fair and justice treatment of women and men to reach gender equality.
- Gender **equality** refers to the equal enjoyment by women and men or boys and girls of rights, opportunities, services and resources.
- Gender **analysis** is the systematic attempt to identify key issues contributing to gender inequalities so that they can be properly addressed.
  - Gender analysis provides the basis for gender mainstreaming and is described as 'the study of differences in the conditions, needs, participation rates, access to resources and development, control of assets, decision-making powers, etc., between women and men in their assigned gender roles'.
• FAO - feminisation has serious implications for the producers’ economic agency and productivity and farm income
• Provided the same access to productive resources as men in the world
  – farm yields could be raised by 20–30%
  – thereby increasing the overall agricultural output in developing countries by 2.5 to 4%
• Besides increasing women’s income, this gain in production could lessen hunger in the world by 12–17%.
- Fish is the most traded commodity
- Much of it is caught in the developing countries for sale in the developed world
- The per caput annual fish consumption is an average of 20 kg across the globe

Traditionally fishing (and fisheries) has a man’s face.
Gendered differences in roles which depends on the types of activity being performed
External factors - physical, social, cultural, political
Traditionally we tend to look at - Men dominate fishing activities and women involved in post harvest activities.
However, this does not essentially give women the visibility they deserve.
Because there is no realisation that ‘women’s efforts also are behind every bite of fish we taste’
Without women’s work, the fish catch would drop, fish processing and delivery to the consumer would not function, and households would have less access to fish and food.
Women’s contributions to fisheries and aquaculture have long been disregarded.
• Almost half the fish sector workers, traders, and marketers are women.
• Women are involved in fishing in inshore and inland waters (rarely sea going; but there are examples of the same); Gleaning; Small scale aquaculture; Fabrication and mending of gear and post harvest activities like sorting and grading, pre-processing, processing, drying and marketing.

Why do we actually need to look at gender in aquaculture and fisheries?
LOOKING AT IT THROUGH THE GAFS JOURNEY
• GAF has been a journey for formalizing the contributions of women researchers and administrators eventually through a GAF Section

• Starting from personal initiatives to creating a formal institution, along the way discovering why gender matters in aquaculture and fisheries

• Forming new perspectives on where gender research needs to go
The journey: Two early influencers

Asian Fisheries Society linked events initiated by Dr M.C. Nandeesha

WorldFish engagement with women in aquaculture began with Dr M.V. Gupta

On the journey, documented typical feminist pathways

• Noticing that fisheries/aquaculture are seen as masculine
  – Women do fish! [WIF Asia 1998]
• Investigating omissions and "adding women”
  – Where are the women in fisheries? [WIF Global 2001]
• Adding women and adding gender
  – From women in fisheries to gender and fisheries [WIF Global 2001]
  – ...the first global look at the gender dimensions of fisheries [GAF1 2004]
• Seeking greater equality, recognising intersectionality and social norms
  – gender & development [GAF2 2007]
  – moving the agenda forward [GAF3 2011]
  – navigating change [GAF4 2013]
  – the long journey to equality [GAF5 2014]
  – engendering security [GAF6 2014]
  – expanding the horizons [GAF7 2018]
Along the way, we found why gender matters in fisheries and aquaculture by synthesising insights from a plethora of research results and deciding what is to be done.
• Often women have little say over the benefits available to them and receive little support in their work.
• Their practical and long-term needs are often neglected.
• They have weak bargaining power to change their situation due to historical gender biases normalized in the workplace and society.
• For women working in fisheries and aquaculture, gender inequality affects their food and financial security, personal safety, family nutrition, and the stability of whole communities.
• These problems are worsening as the industry experiences pressure to minimize labour costs and leans toward fishing and aquaculture practices that degrade the environment and fish stocks.
• This creates a vicious cycle of worsening environmental and social conditions on which all women and men depend.
• This is why gender matters.

Source: Why gender matters; GAFS of the AFS
WE FOUND LARGE CONSTRAINTS FOR WOMEN

• Women have smaller enterprises, lower pay, riskier work
• Gender-blind policies and lack of sex-disaggregated data undermine women’s contributions
• Women have to fight for their basic rights and decision-making power
• Fisheries and aquaculture modernization has downsides for women

AND LARGE OPPORTUNITIES FOR SOCIETY

• Women’s empowerment and group action help overcome constraints
• The whole fish sector wins when women’s contributions are valued
• Society and the environment benefit when women are empowered
• Women fish workers are the key to fish as nutrition
• Integrating women into action on climate change and natural disaster relief benefits households and communities

What needs to be done......

• COUNT WOMEN AND MAKE THEM VISIBLE: FAO's Committee on Fisheries can put gender equality on its agenda. Fisheries agencies can collect regular and accurate gender-specific catch-to-consumer employment data to track trends and progress.

• INCREASE FUNDING TO GENDER HUNDREDFOLD: Make greater investment in targeted gender projects, research and educational outreach. The present quantum is so small and needs a hundredfold increase to achieve impact.

• SUPPORT WOMEN’S EMPOWERMENT: Women can collaborate, assert their rights and upgrade their capacity, if necessary with funding and support for education, advocacy and legal resources. Men’s and male-led organizations can become allies in enhancing women’s autonomy over their lives and livelihoods.

• COLLABORATE ON GENDER: To make the invisible visible, gender equality must be a stated priority in policy, research, and programs, and expertise built in the key agencies along the catch-consumer pathway.
The critical players in advancing gender equality in fisheries are: fisheries agencies, including national and leading international organizations, especially the Food and Agriculture Organization of the United Nations (FAO); development assistance funders; private companies, small and large, in all parts of the catch-to-consumer pathway; fisheries, aquaculture and gender researchers; and grassroots women, community groups and civil society.
Thank You
